

Step into the 4th Industrial Revolution

During the course of this Industrial Revolution, many manufacturers have been left on their own with a significant talent gap. Additionally emerging technologies like IoT and Cloud are exposing their businesses to manufacturing equipment risks never seen before. The most recent attacks on the USA supply chain infrastructure have shown the devastating effects that can be caused by the wrong implementation of these technologies

Our company has found a [fatal flaw](#) in the current state of the emerging technologies market: Most of these technologies are being deployed without any consideration into the Cyber Security risks/threats they expose their customers to. Since most ICS (Industrial Control Systems) were built as silos, the implications of exposing them to these new technologies range from profit losses, compromising the integrity of your equipment to physical harm to your employees.

By partnering with us we will help you embark in the journey to develop and secure your ICS systems and Smart Factory 4.0 with world class benefits that very few companies have access to (*Table 1*).

Table 1

<u>PARTNERS</u>	<u>CUSTOMERS</u>
<ul style="list-style-type: none"> • Sales increase: <ul style="list-style-type: none"> ○ Hardware ○ PLC security updates ○ Machine and HMI upgrades ○ Among many others • Gain access to a very small group of qualified IoT and Cyber sec professionals. • Leverage IoT partnerships with the world leading companies. • Keep your profit source safe. • Position your company ahead of competitors. 	<ul style="list-style-type: none"> • Gain access to high demand services. • Keep your company and staff safe. • Jump right into the 4th industrial revolution, focus on what makes money rather than technology. • Skip the learning curve and jump right into profits • Identify your critical infrastructure and secure it. • Avoid software scams for IoT and Cyber Security. • Gain access to military grade Cyber Security.

DIGITAL TRANSFORMATION

This is the process of evolving your company into the digital world. Machines, processes, employees, suppliers, among many others must embrace the transformation process

SUSTAINABLE

Our goal is to become the leading consulting of the digital world. Part of our profits will be donated to help minimize our physical footprint on earth in reforestation campaigns and recycling initiatives.

PROFITABLE

Generating profit while learning the technology of this industrial revolution is challenging. We help you leverage the technology aspect, so you can focus on profits.

SMART FACTORY

Welcome to the 4th Industrial revolution. Turning intelligence into action.

INDUSTRIAL IOT

We will help you understand and leverage IoT Cloud technologies to build the backbone of your Smart Factory.

CYBER SECURITY

Our Cyber Security services are military grade. Backed by the leading Cyber Security certifications.

BUZZWORD DICTIONARY

Speed learn most of the IIoT industry's common terms and get ahead of your competition

Features and Benefits

One of our goals: SIMPLIFY COMPLEXITY. These new technologies are challenging, even for the most qualified, for this reason we offer you a comprehensive simplified approach to deploy them:

- Understand your needs and help you create a strategy
- Evaluate the current state of your OT (Operation Technology) environment
- Leverage our relationships with world class vendors
- Develop a secure and reliable Smart Factory architecture
- Fill in the talent gap in your company
- Position your company ahead of competitors
- Provide you our buzz word dictionary. We promise it will save you time reading or watching Youtube videos

With our partnership you will gain access to the direct sources of knowledge and SMEs in the IIoT and Cyber Security markets. Skip the middleman, the expensive and tedious DIY path that will set you back many years behind your competitors.

You will also join one of the most exclusive technology groups in the world. As we say: "The world belongs to the few of us that hold the knowledge".

Company Services

- Smart Factory 4.0 full package
- Cyber Security penetration testing (Pen Testing)
- Extended IoT department service
- Consulting IT, OT, IOT and Cyber Security.
- Cyber Security training (Only available for Military and Government personel)
- Available upon previous business agreemet:
 - IoT platform development
 - IoT platform hosting
 - IoT platform support
